Answer:

SAP landscapes typically consist of three main types of systems:

- Development System (DEV): Where developers create and customize solutions.
- Quality Assurance System (QAS): Used for testing and validating changes before moving to production.
- Production System (PRD): The live environment used by end-users for business operations.

Sometimes, additional systems like sandbox, training, or sandbox systems are used, but the core landscape revolves around these three.

3. Can you explain the SAP system architecture?

Answer:

SAP system architecture generally follows a three-tier structure:

- Presentation Layer: The user interface, typically SAP GUI or web browsers.
- Application Layer: The middle layer where SAP applications run. It consists of one or more application servers.
- Database Layer: The backend where all data is stored, managed by a database system like Oracle, SQL Server, or SAP HANA.

This architecture supports scalability, load balancing, and fault tolerance.

4. What are the key components of SAP Basis?

Answer:

Major components include:
