Deep Dive: Explaining Key Concepts in Virology MCQs

Viral Structural Features and Classification

Viruses are classified based on:

- Genetic material: DNA or RNA, single-stranded or double-stranded
- Capsid symmetry: Icosahedral, helical, complex
- Presence of an envelope: Lipid envelope derived from host membranes

For example, herpesviruses are enveloped, double-stranded DNA viruses with icosahedral symmetry, whereas picornaviruses are small, non-enveloped, single-stranded RNA viruses.

Replication Strategies

Understanding the replication cycle is crucial:

- Attachment: Virus binds to host cell receptors
- Penetration: Entry into the cell via fusion or endocytosis
- Uncoating: Release of viral genome
- Replication and transcription: Synthesis of viral components
- Assembly: Formation of new virions
- Release: Exit from the host cell, often causing cell damage

Different viruses utilize different pathways, such as the lytic cycle or latency, which influence disease course and treatment.

Diagnostic Techniques

Key laboratory methods include:

- Serology: Detection of antibodies (IgM, IgG)
- Polymerase Chain Reaction (PCR): Detects viral nucleic acids with high sensitivity
- Culture: Growing the virus in cell culture, useful for some viruses
- Antigen detection: Rapid detection of viral proteins

Matching the diagnostic technique to the virus and clinical scenario is vital for accurate diagnosis.

Applying Knowledge to Clinical and Public Health Contexts

Many MCQs focus on how virology knowledge translates into clinical practice:

- Recognizing which viruses cause specific syndromes
- Understanding modes of transmission to implement control measures
