- Staff management: Scheduling, service assignment
- Inventory management: Supplies ordering, stock updates
- Payment processing: Billing, receipts

Level 2 and Beyond

Further decomposes complex processes into detailed sub-processes, such as specific steps in appointment booking or inventory replenishment.

Constructing a Data Flow Diagram for Salon Management System

Designing an effective DFD involves a systematic approach:

Step 1: Gather Requirements

Identify all stakeholders and understand their data interactions.

Step 2: Identify External Entities

Determine who interacts with the system outside its boundaries.

Step 3: Define Processes

List all functions the system must perform.

Step 4: Determine Data Stores

Identify where data resides within the system.

Step 5: Map Data Flows

Establish how data moves between entities, processes, and data stores.

Step 6: Validate and Refine

Review the diagram with stakeholders for accuracy and completeness.
