the operator's skill to manage feeding, compression, tying, and ejection.

Manual Feeding System

Operators manually feed hay or straw into the chamber, ensuring proper loading for optimal bale formation. The manual system provides tactile feedback, allowing the operator to judge the material's density and quality.

Compression and Tying Mechanism

The AP 52 uses a mechanical compression system that compacts the material into a dense bale before tying. The tying process involves manual or semi-manual twine tying, which, while labor-intensive, provides control over the tying process and bale integrity.

Control Levers and Operation

- Feeding Lever: Manual control to feed material into the chamber.
- Compression Lever: Engages the compression process.
- Tying Lever: Initiates the tying cycle.
- Ejection Mechanism: Manual or semi-automatic, depending on specific configurations.

Operators need to be familiar with the sequence of operations, which, although simple, requires attention and experience to optimize bale quality and machine efficiency.
