This centralization enhances visibility across the network, enabling swift identification of expired, revoked, or compromised certificates.

Benefits:

- Single pane of control for certificates
- Reduced risk of mismanagement or duplication
- Easier compliance audits

2. Automated Certificate Enrollment and Renewal

Manual certificate management is error-prone and labor-intensive. Nokia addresses this with automation features that handle certificate enrollment, renewal, and deployment seamlessly. Using protocols such as SCEP (Simple Certificate Enrollment Protocol) or EST (Enrollment over Secure Transport), devices and systems can automatically request and obtain certificates from trusted authorities.

Advantages:

- Eliminates manual intervention
- Ensures certificates are always up-to-date
- Minimizes downtime caused by expired certificates

3. Support for Multiple Certificate Authorities (CAs)

Nokia's certificate management system supports integration with various CAs, including:

- Public CAs (e.g., DigiCert, Let's Encrypt)
- Private/internal CAs within enterprise environments

This flexibility allows organizations to tailor their security infrastructure according to compliance and operational needs, while maintaining trust hierarchies.

4. Certificate Revocation and Trust Management

In the event of a security breach or compromise, timely revocation of affected certificates is crucial. Nokia's solution provides tools for revoking certificates and disseminating Certificate Revocation Lists (CRLs) or enabling Online Certificate Status Protocol (OCSP) responses, ensuring that compromised entities are prevented from authenticating.

Key points:

- Rapid revocation workflows
- Real-time status checks
